

SIMS Dashboards

Transform Security Data into Actionable Visual Insight

SIMS Dashboards extends the power of SIMS by transforming real-time and historical security data into clear, actionable visual insights. With a library of more than 25 dashboards, security leaders and executives gain immediate visibility into security posture, trends, risk, and workload across their industrial security program – without manual reporting or data calls. With clear, visual analytics at their fingertips, teams strengthen risk and compliance management, improve incident response, support scalable growth, and continuously optimize security operations.

At-a-Glance Views of Security Posture & Risk

Designed based on the real-world needs of security professionals and the national security community, SIMS Dashboards is a COTS analytics solution that delivers a curated library of dashboards with key performance indicators across cleared personnel, classified documents and materials, visitor and lobby activity, incidents and insider threat data, facilities, and contracts. At-a-glance visualizations provide immediate insight into security posture, enabling leaders to quickly spot trends, identify emerging risks, and take action before issues escalate.

Rapid Filtering & Drill Down

Flexible filtering allows users to analyze security data at any level – from the enterprise down to specific business units, sites, facilities, or classified programs. Role-based access controls inherited from SIMS ensure appropriate visibility, and authorized users can drill directly into the underlying records behind each visualization to support root-cause analysis and follow-up action. This enables faster decisions, stronger oversight, and more effective execution of an industrial security program.

A Personalized, Streamlined Experience

Users can tailor their SIMS Dashboards experience to focus on the specific areas or facilities they oversee, saving time and supporting effective governance, accountability, and decision-making. Each user can save preferred filtered views of individual dashboards, designate the charts and visualizations that appear on their homepage, and save favorite dashboards for rapid access. Security data is easily exported to Excel/.csv format in one click for use in presentations, briefings, or custom analysis.

Insider Threat Program Management & Compliance

SIMS Dashboards includes a dedicated collection of insider threat dashboards that empower organizations to operationalize and manage a NISPOM 32 CFR Part 117 compliant insider threat program to detect and protect against insider risk. These dashboards provide centralized, real-time visibility into insider risk indicators, supporting whole-person evaluation and enabling Security, IT, HR, and Legal teams to collaborate in identifying and assessing potential threats.

Predictive Insider Risk Insight

Each organization's ITPSO(s) can configure a risk-based insider threat algorithm within SIMS, tailoring threat models to reflect their unique risk priorities. SIMS Dashboards then leverages this algorithm and underlying SIMS data to deliver real-time risk modeling and predictive insight, helping teams identify emerging insider risk indicators and take action early to reduce the likelihood of incidents.

Visibility Delivered Across the Organization

SIMS Dashboards is licensed separately from SIMS, enabling executives and corporate stakeholders to view metrics and generate reports without requiring direct SIMS access or data calls. System administrators can easily grant or restrict dashboard access based on each user's role and business needs – delivering security visibility across the organization.

SIMS Dashboards

Key Features

- 25+ out-of-the-box dashboards
- Insider threat dashboard collection based on client's configurable, risk-based algorithm
- Data filtering at enterprise, business unit, site, facility, and program levels
- Role-based access controls inherited from SIMS
- Ability to view underlying SIMS records associated with visualizations
- Personalized homepage with user-defined charts and favorite dashboards
- One-click export to Excel/.csv
- Option to deploy on-prem or in CMMC Level 2 certified cloud environment

Out-of-the-Box Dashboards

- **Personnel** – Personnel PR Status, Clearances Granted but Not Yet Briefed, Clearances by Contract, Foreign Travel by Country, Training, Access & Eligibility; SA Briefing Status; Polygraph Results by Type and Agency
- **Visitors** – Visitors by Citizenship
- **Contracts** – Contracts by Value & Sponsor
- **Incidents** – Incident by Type
- **Insider Threat** – Risk Analysis; Personnel Overall Risk Ranking; Threats by Clearance Level, Container Access, IS Access, Special Access, Contract, Foreign Travel, Foreign Contacts, and Incidents
- **Documents** – Document Transaction Metrics; Active Documents by Type

About TechnoMile

TechnoMile is the trusted, AI-enabled platform that unifies growth, contracts, compliance, and security operations for organizations executing the government mission. Powered by domain-trained AI and decades of federal expertise, our connected platform embeds continuously-learning intelligence into regulated workflows – helping companies win more opportunities, de-risk contract execution, and strengthen security and compliance posture with clarity, confidence, and continuous audit readiness.
