

SIMS Lobby

Streamline Visitor Control at Your High-Security Facilities

SIMS Lobby works hand-in-hand with SIMS to deliver an efficient, end-to-end visitor management experience at high-security facilities. Designed specifically for security officers and entry control personnel, SIMS Lobby supports the full visitor lifecycle, including pre-screening, ID verification and denied-party checks, check-in and check-out, badge issuance, access control for meetings and conferences, and integrated process notifications and approvals for security and foreign visitor administrators – reducing manual coordination and administrative overhead while maintaining strong security controls at every access point.

Streamlined Digital Visitor Pre-Screening

SIMS Lobby simplifies visitor pre-screening and approvals through a streamlined digital process. Using SIMS Employee Portal, employees can pre-notify the security team of upcoming visitors, visit authorizations, and conferences or meetings, including the ability to upload visitor lists. For foreign visitors, export compliance questions can be incorporated into the submission, with Export/Trade Compliance team members included in the approval process as needed. Submitted requests flow immediately to SIMS, and email notifications keep all parties informed at every step.

Rapid Visitor Check-In/Out

Upon arrival, entry control staff can rapidly verify a visitor's ID using document reader integration, perform denied-party screening as required, and instantly locate the approved visit record to complete check-in. Visitors without pre-approval can have records created on the spot from scanned ID information for immediate processing and badge issuance. SIMS Lobby also supports rapid check-out with badge return tracking, and email notifications can be triggered upon both arrival and departure.

Efficient Management of Conferences & Meetings

SIMS Lobby also supports efficient management of external visitor and internal attendee access for conferences and meetings hosted at the client's facilities. Visitors can be pre-screened and approved in advance through SIMS Employee Portal, and any walk-in attendees without pre-approval can be quickly submitted and processed on the spot. Security teams can validate required clearances and special accesses and approve visitors in minutes, with real-time notifications keeping event coordinators informed throughout.

Visitor Visibility & Inspection-Ready Records

Every visitor interaction recorded in SIMS Lobby flows directly into SIMS, maintaining a complete, audit-ready record of all visitor activity across the organization's facilities. Security teams benefit from real-time visibility into who is on-site and why, supporting fast responses to security inquiries and ensuring every visit is properly documented and controlled. SIMS' built-in reporting tools support audits, inspections, and internal reviews by providing a comprehensive, activity-level record that is always current and readily accessible.

Purpose-Built for Entry Control Personnel

SIMS Lobby delivers a streamlined, role-appropriate interface that supports fast, accurate visitor processing without requiring full SIMS access. Rather than requiring a full SIMS license for every guard and entry control staff member across multiple lobbies and shifts, SIMS Lobby offers a lower-cost, limited-access license that provides exactly the visibility and functionality lobby staff need – reducing licensing costs while maintaining strong security controls at every access point.

SIMS Lobby

Key Features

- Digital visitor pre-screening via SIMS Employee Portal
- Document reader integration for ID verification
- Denied-party screening via Descartes Visual Compliance integration
- Instant badge printing upon check-in
- Rapid check-out with badge return tracking
- Meeting and conference management
- Real-time email notifications
- Real-time synchronization with SIMS
- Lower-cost, limited-access licensing for guards and entry control personnel
- Option to deploy on-prem or in CMMC Level 2 certified cloud environment

Hardware Add-On

- **Thales/Gemalto AT9000 MK2 Document Readers** are available as a hardware add-on to the client's SIMS solution. Our Customer Delivery team programs the scanners, installs the data collection software, and ships them directly to the client – fully configured and ready to use.

About TechnoMile

TechnoMile is the trusted, AI-enabled platform that unifies growth, contracts, compliance, and security operations for organizations executing the government mission. Powered by domain-trained AI and decades of federal expertise, our connected platform embeds continuously-learning intelligence into regulated workflows – helping companies win more opportunities, de-risk contract execution, and strengthen security and compliance posture with clarity, confidence, and continuous audit readiness.
