

GovSearch NoticesIQ

Streamline & Optimize Your Task Order Workflows

GovSearch NoticesIQ unifies all your company's task order notices into a single workflow and provides valuable, AI-powered opportunity insights, enabling business development, capture, and GWAC/IDIQ teams to efficiently evaluate new task order opportunities and empowering companies to maximize the revenue potential of their contract vehicles.

Consolidate All Notices into One Workstream

GovSearch NoticesIQ is your organization's hub to manage task order notices. Our solution ingests all task order email notices your organization receives from the government, as well as notices from any contract vehicle portal that employs standard security protocols, mitigating the risk of missed notices and eliminating the headache of visiting multiple sites. GovSearch NoticesIQ includes integrations with top portals – including eBuy, eGos, Symphony, and others – with the flexibility to add custom portal connections to support a client's unique range of contract vehicles.

Get Insight from Mila, Your Intelligent Digital Assistant

Mila, TechnoMile's intelligent digital assistant, generates an AI-authored executive summary directly on every task order notice – a quick snapshot of key details, a plain-language read on what's actually being requested, and a clear list of response dates and submission requirements – so your team can triage and qualify without digging through a single attachment. When a task order is amended, Mila automatically flags exactly what changed, so your team never has to re-read a notice from scratch to catch an updated deadline or requirement.

Ask Mila Anything About a Task Order

Go a step further with instant, conversational access to Mila. Trained to interact with your team like a seasoned BD or capture professional, Mila can answer follow-up questions about a task order's requirements, dates, or documents on the spot, helping your team qualify leads and make bid decisions faster.

See Details That Matter to You

In addition to displaying critical details about each task order – the customer, what's being purchased, key deadlines, and points of contact – GovSearch NoticesIQ can use AI to capture and display client-specific custom fields with details that matter exclusively to your company when qualifying task orders (i.e., special requirements).

Identify the Right Contacts on Task Orders

GovSearch NoticesIQ surfaces relevant decision-maker and policy-maker contacts on task order records, which are pulled from TechnoMile's proprietary GovSearch database and displayed alongside any contacts provided by the government. This gives BD teams the relationship intelligence they need to move quickly on time-sensitive task order pursuits.

Strengthen Team Collaboration

Centrally capture notes about a task order notice for visibility across your team and easily notify colleagues about relevant new opportunities. This enables easy collaboration as you triage and qualify new notices, offering a superior alternative to siloed communication in tools like email or Slack.

Unlock Powerful Workflows & Analysis

When your team identifies a relevant notice, they can tag it with one click and auto-create the new lead – called a “Spark” – in your CRM, with the option to download related files. Sparks can be used to automate BD and capture workflows and analyze your company’s bid/no-bid trends and performance on specific contract vehicles.

Satisfy Rigorous Security Requirements

GovSearch NoticesIQ is hosted in AWS GovCloud and our platform has attained FedRAMP Moderate Equivalency, allowing TechnoMile to store task order notices with attachments containing CUI. All ingested notices are evaluated by our AI model and flagged when potential CUI is detected, alerting your team to CUI handling considerations in support of your company’s compliance with information security requirements.

Access Federal Opportunity & Market Intelligence

GovSearch NoticesIQ includes access to GovSearchAI, TechnoMile’s opportunity and market intelligence platform that consolidates and enriches data from top federal sources. Using GovSearchAI, you can identify best-fit opportunities, find potential partners, conduct market and competitive analysis, locate the right government contacts, and sharpen your win strategies.

Key Features

- Integration with eBuy, eGos, and Symphony portals
- Custom portal integrations (add-on service)
- AI-powered email notice ingestion, including attachments
- Centralized view of all new task orders
- CUI document handling
- Intelligent capability tagging
- Ability to filter, sort, and create saved searches
- Mila, your intelligent digital assistant
- Mila Insights executive summaries
- Ability to capture custom fields (AI-sourced)
- Contact enrichment from GovSearch
- Team collaboration
- One-click conversion to Sparks (i.e., leads) with CRM integration
- Email alerts and notifications
- Access to federal opportunity and market intelligence platform

About TechnoMile

TechnoMile is the trusted, AI-enabled platform that unifies growth, contracts, compliance, and security operations for organizations executing the government mission. Powered by domain-trained AI and decades of federal expertise, our connected platform embeds continuously-learning intelligence into regulated workflows – helping companies win more opportunities, de-risk contract execution, and strengthen security and compliance posture with clarity, confidence, and continuous audit readiness.
