## Streamline Intake and Assessment of Solicitations, Contracts, and Mods

TechnoMile solutions are purpose-built to help companies address the complex requirements of doing business with the government. With TechnoMile's Transform Copilot, companies can digitize federal solicitations, prime or subcontract awards, as well as federal contract modifications and our pre-trained AI models intelligently extract and summarize industry-specific data, automating the creation of detailed records in TechnoMile solutions and fast-tracking your team's assessment of new contract opportunities, awards, and mods. This shaves hours off solicitation, contract, and mod intake activities and puts critical details at your team's fingertips, saving them time as they perform analyses and make decisions that create and protect value for your organization.

### The Industry's Most Accurate, Trustworthy Results

Transform Copilot is powered by TechnoMile ElevateAI Service. ElevateAI infuses our TechnoMile GovCloud Platform with the power of generative AI and best-in-class Large Language Models, underpinned by domain-trained technologies. This frees contractors from the limitations of legacy solutions that rely on highly structured data. And, because TechnoMile trains its AI models using industry-specific forms, subcontracts, and purchase orders, as well as leverages industry-specific prompts, our AI-powered copilots and agents deliver the most accurate, trustworthy outputs for GovCon and Aerospace and Defense companies. The TechnoMile GovCloud platform has attained FedRAMP Moderate Equivalency, enabling clients to confidently adopt Transform Copilot while maintaining compliance with stringent federal cybersecurity mandates.

### Streamlined Solicitation Assessments, Stronger Proposals

Transform Copilot works together with TechnoMile Pre-Award Management, heightening an organization's efficiency as teams collaborate to develop winning proposals. Using Transform Copilot, contractors can upload federal solicitation and amendment documents and extract critical business intelligence – including proposed periods of performance, CLINs/SLINs, and clauses – to automate solicitation and proposal workflows. The copilot provides an AI-powered summary of key solicitation/amendment details and users can leverage Mila, TechnoMile's intelligent digital assistant, to conversationally query the document to quickly understand additional specifics – such as evaluation criteria, labor categories and rates, and wage determination requirements – and rapidly create proposal artifacts. This equips companies to accelerate their assessment of the opportunity and related risks, enhance their pricing approach and strategy, and produce more compliant, compelling proposals.

### Efficient, Automated Contract Creation

Upon award, Transform Copilot can intelligently extract data from prime contract award forms, federal subcontracts, and purchase orders. The copilot efficiently guides your team through review of all extracted details, including comparison against your clause library to identify any discrepancies or changes in terms that could heighten your company's risk. Once data validation is finalized, the copilot automatically creates a detailed new contract record in TechnoMile CLM, complete with all periods of performance, CLINs/SLINs, and clauses. This eliminates hours of manual data entry associated with each new award, improves your data's integrity, and frees up your team to focus on strategic priorities, rather than administrative tasks. Transform Copilot also generates a summary of each new contract, enabling internal approvers and stakeholders to quickly and easily understand the scope of a new award, while Mila provides instant, conversational access to contract details.

# Transform Copilot

## Simplified Mod Execution

When a contract modification is ingested, Transform Copilot's wizard walks the contract manager through the required changes to periods of performance, CLINs/SLINs, and clauses, showing the original and recommended new values side by side. Once validated, changes are automatically applied to the contract record. Mila then generates a highly digestible summary of everything the mod changed, including any new risk factors, giving the contract manager instant insight and a clear record to support mod approval (if required).

## Rapid Contract Record Updates

Companies that use TechnoMile's integrated Growth Suite or Pre-Award Management solution to manage their pursuit of contracts can convert a Closed-Won opportunity or proposal record to create a baseline contract record. Then, upon receipt of the contract award document, Transform Copilot can be used to rapidly update the baseline contract record with the latest information. Contract details – including periods of performance, CLINs/SLINs, and clauses – can be extracted and presented for review, speeding the creation of a comprehensive new contract record.

## Automated Capture of Contract Deliverables & Obligations

Transform Copilot can be used to automate obligation scheduling and management. AI-powered extraction of obligations from standard documents enables identification of deliverables, CDRLs, and other types of obligations and, when presented for validation, your contracts professional has the option to create a corresponding deliverable or task. This streamlines the capture of all obligations embedded within a contract, strengthening your team's ability to maintain compliance throughout the contract lifecycle.

## Bring Greater Efficiency to CPAR Response Management

Your company can also leverage the copilot's AI-powered extraction to capture CPAR evaluations within TechnoMile CLM, speeding this process. Companies can track CPAR evaluations, route them internally to efficiently gather feedback and substantiating documentation to shape responses, capture related adjudications, as well as leverage this past performance data to better inform future pursuits.

## About TechnoMile

TechnoMile is the trusted, AI-enabled platform that unifies growth, contracts, compliance, and security operations for organizations executing the government mission. Powered by domain-trained AI and decades of federal expertise, our connected platform embeds continuously-learning intelligence into regulated workflows – helping companies win more opportunities, de-risk contract execution, and strengthen security and compliance posture with clarity, confidence, and continuous audit readiness.
